

Lec 09 - Visualization with ggplot2

Lecture 09

Dr. Colin Rundel

The Grammar of Graphics

- Visualization concept created by Leland Wilkinson (The Grammar of Graphics, 1999)
- attempt to taxonimize the basic elements of statistical graphics
- Adapted for R by Hadley Wickham (2009)
 - consistent and compact syntax to describe statistical graphics
 - highly modular as it breaks up graphs into semantic components
 - ggplot2 is not meant as a guide to which graph to use and how to best convey your data (more on that later), but it does have some strong opinions.

Terminology

A statistical graphic is a...

- mapping of **data**
- which may be **statistically transformed** (summarized, log-transformed, etc.)
- to **aesthetic attributes** (color, size, xy-position, etc.)
- using **geometric objects** (points, lines, bars, etc.)
- and mapped onto a specific **facet** and **coordinate system**

Anatomy of a ggplot call

```
1  ggplot(  
2    data = [dataframe],  
3    mapping = aes(  
4      x = [var x], y = [var y],  
5      color = [var color],  
6      shape = [var shape],  
7      ...  
8    )  
9  ) +  
10  geom_[some geom](  
11    mapping = aes(  
12      color = [var geom color],  
13      ...  
14    )  
15  ) +  
16  ... # other geometries  
17  scale_[some axis]_[some scale]() +
```

Data - Palmer Penguins

Measurements for penguin species, island in Palmer Archipelago, size (flipper length, body mass, bill dimensions), and sex.

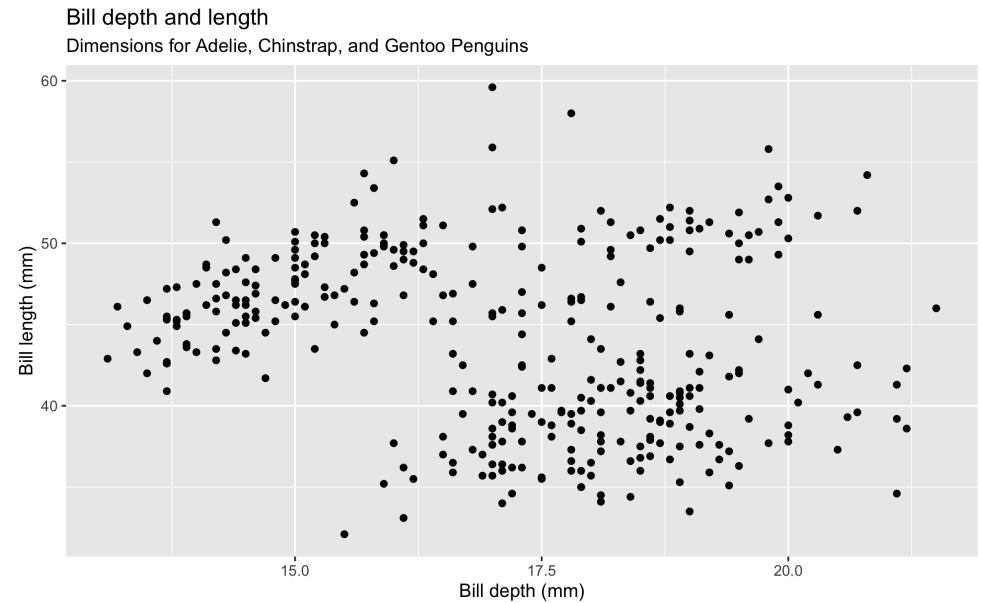

```
1 library(palmerpenguins)
2 penguins
```

```
# A tibble: 344 × 8
  species island   bill_length_mm bill_depth_mm
  <fct>   <fct>         <dbl>         <dbl>
1 Adelle  Torgersen       39.1           18.7
2 Adelle  Torgersen       39.5           17.4
3 Adelle  Torgersen       40.3           18
4 Adelle  Torgersen       NA             NA
5 Adelle  Torgersen       36.7           19.3
6 Adelle  Torgersen       39.3           20.6
7 Adelle  Torgersen       38.9           17.8
8 Adelle  Torgersen       39.2           19.6
9 Adelle  Torgersen       34.1           18.1
10 Adelle Torgersen       42             20.2
# i 334 more rows
# i 4 more variables: flipper_length_mm <int>,
#   body_mass_g <int>, sex <fct>, year <int>
```

A basic ggplot

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point() +  
9 labs(  
10  title = "Bill depth and length",  
11  subtitle = paste(  
12    "Dimensions for Adelie, Chinstrap,",  
13    "and Gentoo Penguins"  
14  ),  
15  x = "Bill depth (mm)",  
16  y = "Bill length (mm)",  
17  color = "Species"  
18 )
```

Text \leftrightarrow Plot

| *Start with the `penguins` data frame*

```
1 ggplot(data = penguins)
```

Start with the `penguins` data frame, *map bill depth to the x-axis*

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm  
5   )  
6 )
```

Start with the `penguins` data frame, map bill depth to the x-axis *and map bill length to the y-axis*.

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 )
```

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis.
Represent each observation with a point

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8   geom_point()
```

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point *and map species to the color of each point*.

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point(  
9   mapping = aes(color = species)  
10 )
```

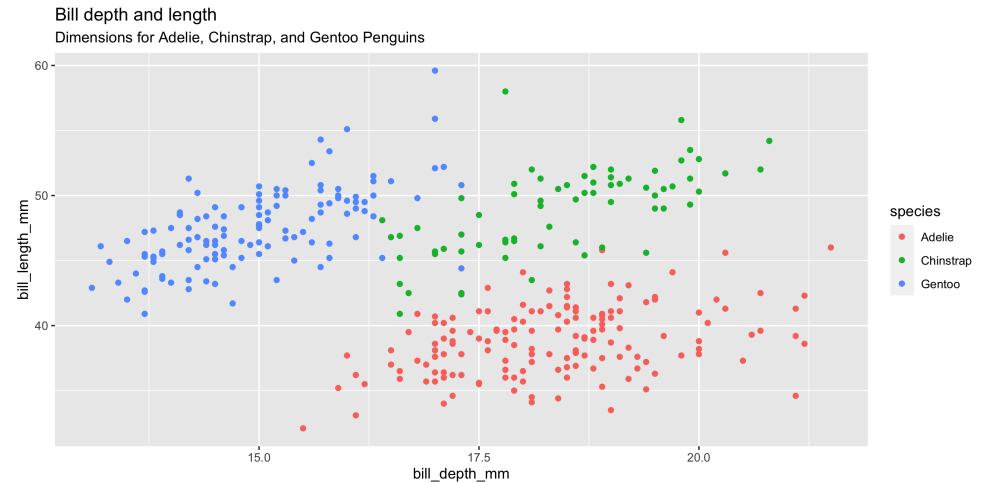

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. *Title the plot "Bill depth and length"*

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point(  
9   mapping = aes(color = species)  
10 ) +  
11 labs(title = "Bill depth and length")
```

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. Title the plot “Bill depth and length”, add the subtitle “Dimensions for Adelie, Chinstrap, and Gentoo Penguins”

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point(  
9   mapping = aes(color = species)  
10 ) +  
11 labs(  
12   title = "Bill depth and length",  
13   subtitle = paste("Dimensions for Adelie,",  
14                   "Chinstrap, and Gentoo",  
15                   "Penguins")  
16 )
```

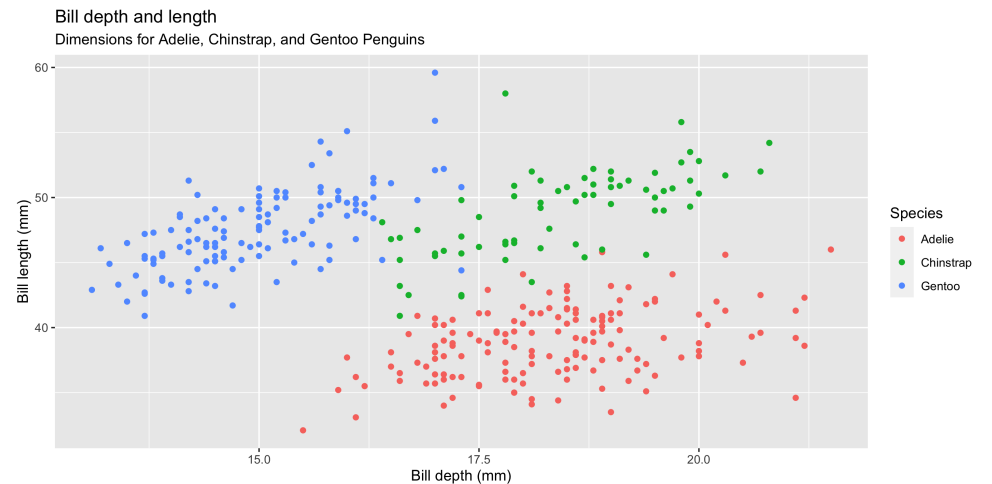

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. Title the plot “Bill depth and length”, add the subtitle “Dimensions for Adelie, Chinstrap, and Gentoo Penguins”, label the x and y axes as “Bill depth (mm)” and “Bill length (mm)”, respectively

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point(  
9   mapping = aes(color = species)  
10 ) +  
11 labs(  
12   title = "Bill depth and length",  
13   subtitle = paste("Dimensions for Adelie,",  
14                   "Chinstrap, and Gentoo",  
15                   "Penguins"),  
16   x = "Bill depth (mm)",  
17   y = "Bill length (mm)"  
18 )
```

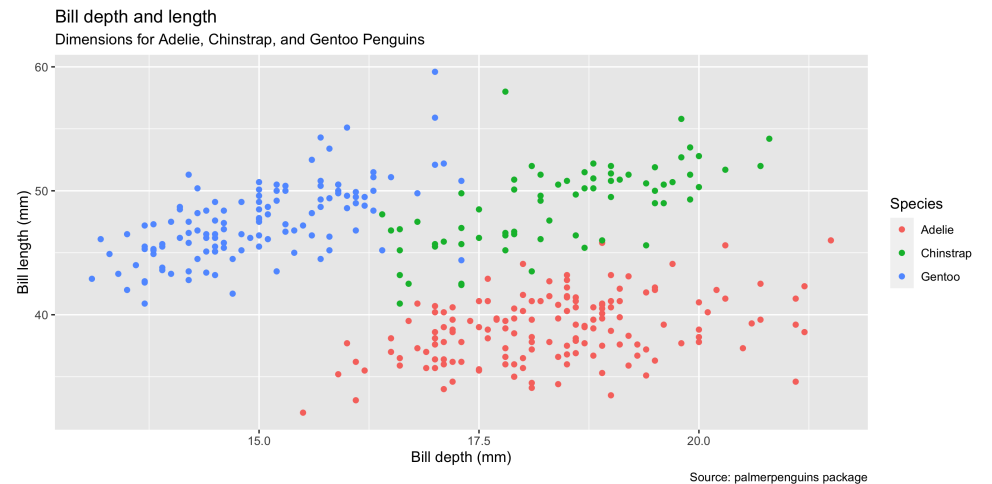

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. Title the plot “Bill depth and length”, add the subtitle “Dimensions for Adelie, Chinstrap, and Gentoo Penguins”, label the x and y axes as “Bill depth (mm)” and “Bill length (mm)”, respectively, *label the legend “Species”*

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8   geom_point(  
9     mapping = aes(color = species)  
10  ) +  
11  labs(  
12    title = "Bill depth and length",  
13    subtitle = paste("Dimensions for Adelie,",  
14                    "Chinstrap, and Gentoo",  
15                    "Penguins"),  
16    x = "Bill depth (mm)",  
17    y = "Bill length (mm)",  
18    color = "Species"  
19  )
```

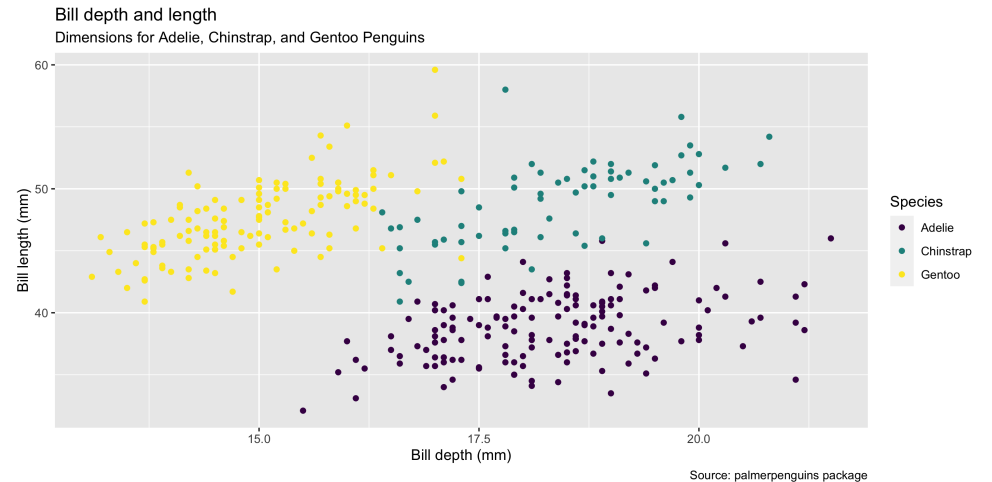

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. Title the plot “Bill depth and length”, add the subtitle “Dimensions for Adelie, Chinstrap, and Gentoo Penguins”, label the x and y axes as “Bill depth (mm)” and “Bill length (mm)”, respectively, label the legend “Species”, and add a caption for the data source.

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8 geom_point(  
9   mapping = aes(color = species)  
10 ) +  
11 labs(  
12   title = "Bill depth and length",  
13   subtitle = paste("Dimensions for Adelie,",  
14                   "Chinstrap, and Gentoo",  
15                   "Penguins"),  
16   x = "Bill depth (mm)",  
17   y = "Bill length (mm)",  
18   color = "Species",  
19   caption = "Source: palmerpenguins package"  
20 )
```

Start with the `penguins` data frame, map bill depth to the x-axis and map bill length to the y-axis. Represent each observation with a point and map species to the color of each point. Title the plot “Bill depth and length”, add the subtitle “Dimensions for Adelie, Chinstrap, and Gentoo Penguins”, label the x and y axes as “Bill depth (mm)” and “Bill length (mm)”, respectively, label the legend “Species”, and add a caption for the data source. *Finally, use the viridis color palette for all points.*

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8   geom_point(  
9     mapping = aes(color = species)  
10  ) +  
11  labs(  
12    title = "Bill depth and length",  
13    subtitle = paste("Dimensions for Adelie,",  
14                    "Chinstrap, and Gentoo",  
15                    "Penguins"),  
16    x = "Bill depth (mm)",  
17    y = "Bill length (mm)",  
18    color = "Species",  
19    caption = "Source: palmerpenguins package"  
20  ) +  
21  scale_color_viridis_d()
```

Argument names

Often we omit the `data` and `mapping` argument names when building plots with `ggplot()`.

```
1 ggplot(  
2   data = penguins,  
3   mapping = aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8   geom_point(  
9     mapping = aes(color = species)  
10  ) +  
11  scale_color_viridis_d()
```

```
1 ggplot(  
2   penguins,  
3   aes(  
4     x = bill_depth_mm,  
5     y = bill_length_mm  
6   )  
7 ) +  
8   geom_point(  
9     aes(color = species)  
10  ) +  
11  scale_color_viridis_d()
```

Aesthetics

Aesthetics options

Commonly used characteristics of plotting geometries that can be **mapped to a specific variable** in the data, examples include:

- position (`x`, `y`)
- `color`
- `shape`
- `size`
- `alpha` (transparency)

Different geometries have different aesthetics available - see the `ggplot2` `geoms` help files for listings.

- Aesthetics given in `ggplot()` apply to all `geoms`.
- Aesthetics for a specific `geom_*()` can be overridden via `mapping` or as an argument.

color

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species)  
6   )
```

Shape

Mapped to a different variable than `color`

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species, shape = island)  
6   )
```

Sta 523 - Fall 2023

Shape

Mapped to same variable as `color`

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species, shape = species)  
6   )
```

Sta 523 - Fall 2023

Size

Using a fixed value (note this value is outside of the `aes` call)

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species, shape = species),  
6     size = 3  
7   )
```

Size

Mapped to a variable

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species, shape = species, size = body_mass_g)  
6   )
```

Alpha

```
1 ggplot(  
2   penguins,  
3   aes(x = bill_depth_mm, y = bill_length_mm)  
4 ) +  
5   geom_point(  
6     aes(color = species, shape = species, alpha = body_mass_g),  
7     size = 3  
8   )
```

Mapping vs settings

- **Mapping** - Determine an aesthetic (the size, alpha, etc.) of a geom based on the values of a variable in the data
 - wrapped by `aes()` and pass as `mapping` argument to `ggplot()` or `geom_*()`.
- **Setting** - Determine an aesthetic (the size, alpha, etc.) of a geom **not** based on the values of a variable in the data, usually a constant value.
 - passed directly into `geom_*()` as an argument.

From the previous slide `color`, `shape`, and `alpha` are all **aesthetics** while `size` was a **setting**.

Faceting

Faceting

- Smaller plots that display different subsets of the data
- Useful for exploring conditional relationships and large data
- Sometimes referred to as “small multiples”

facet_grid

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point() +  
5   facet_grid(  
6     species ~ island  
7   )
```

Compare with ...

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point(  
5     aes(color = species, shape = island), size = 3  
6   )
```

facet_grid (cols)

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point() +  
5   facet_grid(  
6     ~ species  
7   )
```

facet_grid (rows)

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point() +  
5   facet_grid(  
6     species ~ .  
7   )
```

facet_wrap

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point() +  
5   facet_wrap(  
6     ~ species  
7   )
```

facet_wrap

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm)  
3 ) +  
4   geom_point() +  
5   facet_wrap(  
6     ~ species, ncol = 2  
7   )
```

Faceting and color

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm, color = species)  
3 ) +  
4   geom_point() +  
5   facet_grid(  
6     species ~ sex  
7   )
```

Hiding legend elements

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm, color = species)  
3 ) +  
4   geom_point() +  
5   facet_grid(  
6     species ~ sex  
7   ) +  
8   guides(color = "none")
```

A brief plot tour of ggplot2 plots

Histograms

```
1 ggplot(  
2   penguins, aes(x = body_mass_g)  
3 ) +  
4   geom_histogram()
```

Histograms - bins

```
1 ggplot(  
2   penguins, aes( x = body_mass_g )  
3 ) +  
4   geom_histogram(bins = 50)
```

Histograms - binwidth

```
1 ggplot(  
2   penguins, aes( x = body_mass_g )  
3 ) +  
4   geom_histogram(binwidth = 250)
```

Histograms - color

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, color = species)  
3 ) +  
4   geom_histogram(bins = 20)
```

Histograms - fill

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, fill = species)  
3 ) +  
4   geom_histogram(bins = 20)
```

Histograms - position

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, fill = species)  
3 ) +  
4   geom_histogram(  
5     bins = 20, alpha = 0.5, position = "identity"  
6   )
```

Histograms - facets

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, fill = species)  
3 ) +  
4   geom_histogram(bins = 20) +  
5   facet_grid(species ~ .) +  
6   guides(fill = "none")
```

Density plot

```
1 ggplot(  
2   penguins, aes(x = body_mass_g)  
3 ) +  
4   geom_density()
```

Density plot - fill

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, fill = species)  
3 ) +  
4   geom_density(alpha = 0.25)
```

Density plot - adjust

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, fill = species)  
3 ) +  
4   geom_density(  
5     adjust = 0.5, alpha = 0.25  
6   )
```

Violin plot

```
1 ggplot(  
2   penguins, aes(x = species, fill = species, y = body_mass_g )  
3 ) +  
4   geom_violin()
```

Ridge plot

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, y = species, fill = species)  
3 ) +  
4   ggridges::geom_density_ridges(alpha = 0.5)
```

Ridge plot - more categories + dplyr

```
1 penguins |>  
2   mutate( species_sex = paste0( species, " (", sex, ")") ) |>  
3   ggplot( aes( x = body_mass_g, y = species_sex, fill = species ) ) +  
4   ggribbles::geom_density_ridges( alpha = 0.5 )
```

Box plot

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, y = species)  
3 ) +  
4   geom_boxplot()
```

Box plot - coord_flip

```
1 ggplot(  
2   penguins, aes(x = body_mass_g, y = species)  
3 ) +  
4   geom_boxplot() +  
5   coord_flip()
```

Box plot - swap coords

```
1 ggplot(  
2   penguins, aes(x = species, y = body_mass_g)  
3 ) +  
4   geom_boxplot()
```

Scatter plot

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm, color = species)  
3 ) +  
4   geom_point()
```

Scatter plot - geom_smooth

```
1 ggplot(  
2   penguins,  
3   aes(x = bill_depth_mm, y = bill_length_mm, color = species)  
4 ) +  
5   geom_point() +  
6   geom_smooth( fullrange = TRUE )
```

Scatter plot - geom_smooth w/ lm

```
1 ggplot(  
2   penguins, aes(x = bill_depth_mm, y = bill_length_mm, color = species)  
3 ) +  
4   geom_point() +  
5   geom_smooth(  
6     method = "lm", se = FALSE, fullrange = TRUE  
7   )
```

Line plot

```
1 penguins |>  
2   count(species, year) |>  
3   ggplot(  
4     aes(x = year, y = n, color = species, group = species)  
5   ) +  
6   geom_line()
```

Line plot - with points

```
1 penguins |>  
2   count(species, year) |>  
3   ggplot(  
4     aes(x = year, y = n, color = species, group = species)  
5   ) +  
6   geom_line() +  
7   geom_point()
```

Bar plot

```
1 ggplot(  
2   penguins, aes(x = species)  
3 ) +  
4   geom_bar()
```

Stacked bar plot

```
1 ggplot(  
2   penguins, aes(x = species, fill = island)  
3 ) +  
4   geom_bar()
```

Stacked relative frequency bar plot

```
1 ggplot(  
2   penguins, aes(x = species, fill = island)  
3 ) +  
4   geom_bar(position = "fill")
```

Dodged bar plot

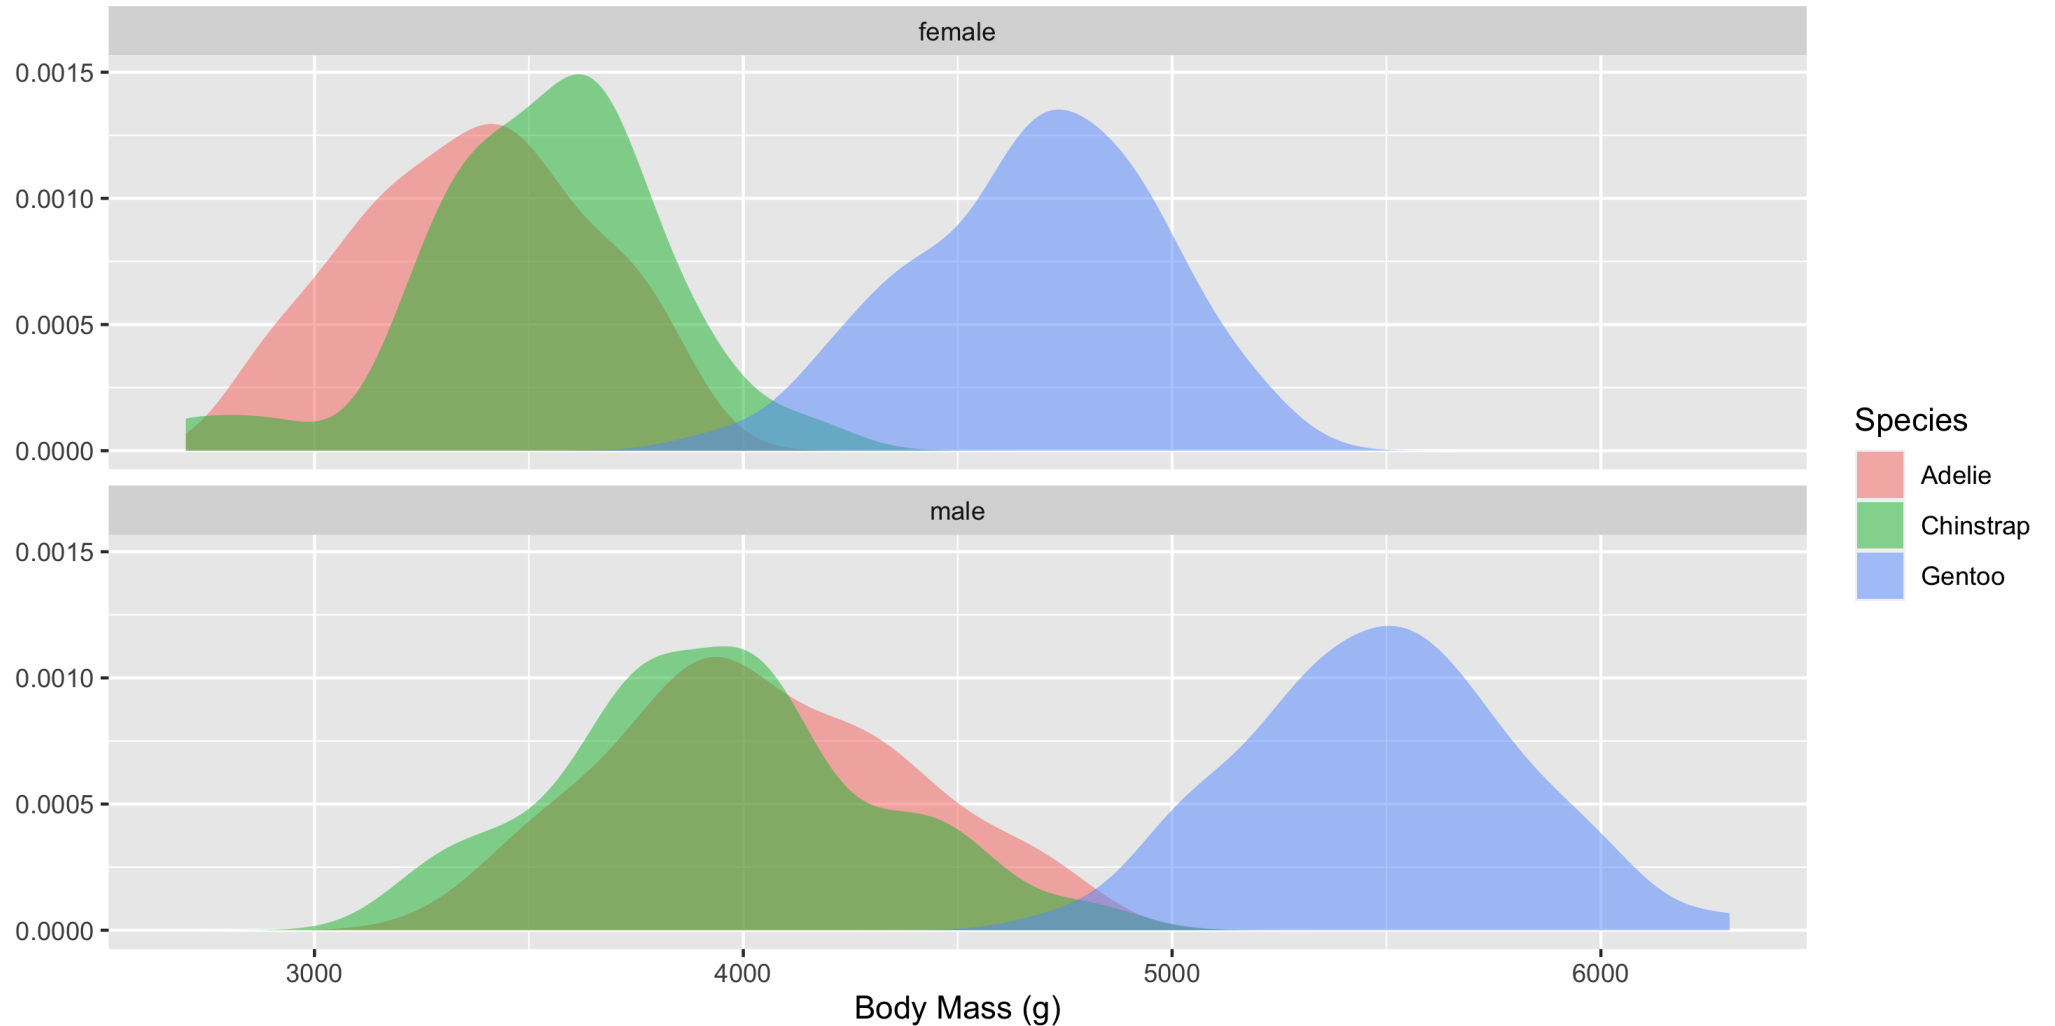

```
1 ggplot(  
2   penguins, aes(x = species, fill = sex)  
3 ) +  
4   geom_bar(position = "dodge")
```

Exercises

Exercise 1

Recreate, as faithfully as possible, the following plot using ggplot2 and the `penguins` data.

Exercise 2

Recreate, as faithfully as possible, the following plot from the `palmerpenguin` package README in `ggplot2`.
